

## **Implementation Of International Project On Application Of Coir In Roads In Collaboration With University Of Wollongong, New South Wales Australia & Cochin University Of Science & Technology, Kochi.**

A collaborative project on “Behavior of coir geotextiles stabilized subgrade soil with special reference to transport infrastructure development” with University of Wollongong and CUSAT, Kochi has been initiated and a review meeting was conducted on 10.12.18. Dr. JS Vinod, Assistant Professor, University of Wollongong, Australia and PI of the project has presented the updated status of the works as part of the project. The objective of the Project is to evaluate the mechanical behavior of the coir geotextile reinforced soil during high frequency cyclic loading and to prepare a numerical model for biodegradability of geotextile.
